WHAT IS

innerScan® **DUAL**

Since creating the world's first stand-on body composition monitor in 1992, Tanita BIA technology has been used by health and wellbeing experts around the world.

The Tanita RD-901 incorporates medical grade Dual Frequency BIA technology, allowing you to have the highest body composition accuracy in the comfort of your home.

What is "Dual Frequency"?

Research has shown that using two different bio-electrical impedance frequencies, provides essential data of a person's intra cellular and extra cellular status. This advanced technology allows greater accuracy when calculating body composition measurements.
