

TANITA
Healthy Habits for Happiness

MC-780MA P

Boost client engagement, differentiate services and drive revenue growth.

The MC-780 MA is a medically accredited, multi frequency, segmental body composition monitor, ideally suited to the health and fitness industry.

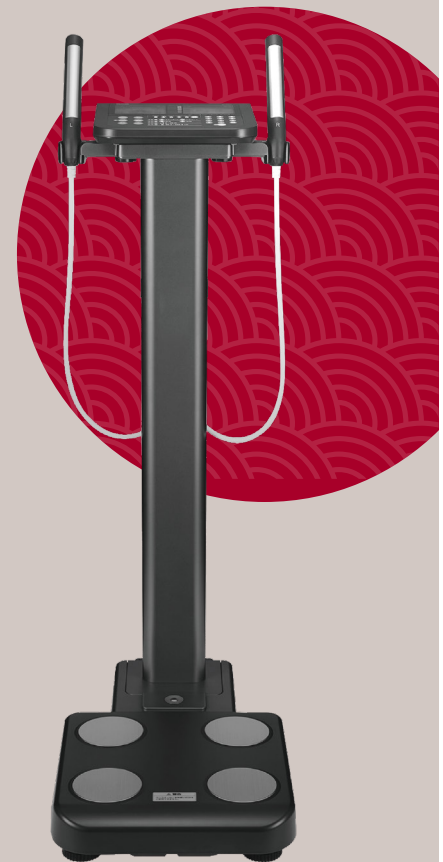

A full segmental body composition analysis is carried out within 20 seconds and is easy to read on the dual display. The results can be automatically saved on an SD card or transferred to a printer, for further consultation. All data can also be saved, analysed and easily shared with clients/members using TANITA PRO Software. The user-friendly monitor is designed as an interactive device, allowing clients to easily perform measurements themselves, without specialist assistance.

Alongside all these features the MC-780 MA also integrates with a number of our partner software solutions, making it our most popular professional device on the market. The screen is easy to rotate, so you can also take confidential measurements. With the goal setter, you can set personal goals together to increase motivation and monitor the progress of a weight or fitness programme.

Key Features

- **Segmental, Multi Frequency Body Composition Analyser**
- **Full segmental body composition measurements** performed in under 20 seconds using the latest multi frequency BIA technology
- **Extra large LED dual display** show analysis in an easy-to-read format
- **Seamlessly integrates** with various fitness-tracking apps, platforms, and software systems.
- **Data can be sent wirelessly** to a PC or Windows tablet using a Bluetooth adaptor
- **Max weight capacity** 270kg with 100g accuracy
- **Results can be automatically stored** on an SD Card, sent to a PC or transferred to a Pictbridge printer to generate a full consultation sheet for further discussion.
- **Interactive stand-alone unit** allows clients to quickly take a measurement without specialist assistance
- **Accuracy grade:** NAWI Class III, MDD Class II-a
