ABOUT THE X6USR

CAPACITY & OPTIONS

The total capacity of the rack is dependent on the size of the dumbbells, medicine balls, etc. that are used. Each tray is 14" wide by 6' long. The rails can be assembled to the top or bottom of the trays to allow dumbbells longer than 14" to extend over the edge.

The standard rack comes with three accessory trays that can be bolted flat or angled to store dumbbells. The rack is also available as a weight storage rack or can be customized to include a combination of trays and weight storage.
