

MC-580

Perfect data also while on the move

This portable body composition monitor MC-580 is the perfect device for client consultations on the move. As it is battery powered, it gives you the ability to use it wherever you want.

To get the most out of all body composition measurement data and the full segmental analysis, we recommend to use either the Tanita Pro app or Tanita Pro software for Windows.

This allows you to analyse, monitor and share body composition for all of your clients, enabling you to give personalised advice about their health, fitness or lifestyle.

Accuracy of the Tanita 4C reactance technology is proven by a validation paper from Pennington Biomedical Research Center (Louisiana State University).

Use with or without column.
